MADE IN CANADA

**IN-FLOOR  
HEATING SYSTEM**

**EASY TO INSTALL**

The COPAL system can be installed directly beneath any tile or ceramic floor. The heating cables are so thin (2 mm or 3/32 inch) that only one adhesive layer is necessary. Your floor remains the same thickness.

You can have it as your main heating system or just as a secondary system, as you wish.

The COPAL system is a snap to install. All it takes is the heating cable, a T-25 stapler and the thermostat. No other equipment is required.

**TALK ABOUT SIMPLE!**

**EASY TO INSTALL**

**COMFORT**  
*at*  
*your feet*

# COMFORT

## FREEDOM AND COMFORT

Clean, reliable, the COPAL heating system keeps you wonderfully warm and cosy.

No dust blowing around, no noise, no smell – this is heating the way it should be!

With the COPAL system, heat rises from the floor, keeping the room temperature uniform and constant.

The system is a hidden part of your floor. You can get rid of baseboard heaters and have your walls back again. Decorate and arrange your furniture just as you please.

The COPAL system is designed to meet your needs in any room, from the living room to the kitchen, bathroom, basement, nursery or office.

*Gain more space in every room, because the Copal system is hidden in the floor.*

*Save on heating bills by setting the temperature precisely to meet your needs.*

## SAFE AND ECONOMICAL

The COPAL heating system is manufactured using top-quality materials and advanced technology.

With its PVC covering offering unique protection, this system is much easier to install, more reliable and safer. COPAL also offers you a selection of electronic thermostats allowing you to set the temperature for your floor as you wish.

*The choice of thermostats may vary.*

As a result, the heat is better distributed, better controlled, more efficient... and less expensive.

*You'll appreciate the healthy all-around warmth of in-floor heating.*

*Invest now and enjoy years of comfort.*
